

General Description

The LTA8071, LTA8072 and LTA8074 (LTA807x) are a family of low power, 48 V wide supply voltage, rail-to-rail output, precision operational amplifiers capable of operating on supplies ranging from +4.5 V (± 2.25 V) to +48 V (± 24 V). This new generation of high-voltage CMOS operational amplifiers, in conjunction with the LTA809x, LTA808x and LTA807x, provide a family of bandwidth, noise, and power options to meet the needs of a wide variety of applications. The LTA807x devices offer outstanding dc precision and ac performance, including low offset (± 75 μ V typically), low offset drift (± 1.5 μ V/ $^{\circ}$ C typically), 4 MHz bandwidth, and 12 nV/ \sqrt Hz input voltage noise density at 10 kHz. Unique features such as differential input-voltage range to the negative supply rail, high output current (± 45 mA), high capacitive load drive of up to 1 nF, and high slew rate (3 V/ μ s) make the LTA807x high-performance operational amplifiers for high-voltage industrial applications.

The robust design of the LTA807x family provides ease-of-use to the circuit designer: integrated RF/EMI rejection filter, no phase reversal in overdrive conditions, and high electro-static discharge (ESD) protection. The LTA807x are optimized for operation at voltages from +4.5 V (± 2.25 V) to +48 V (± 24 V) over the extended temperature range of -40 $^{\circ}$ C to $+125$ $^{\circ}$ C.
